

How to Recover Lost / Hacked Instagram Account Using InstaRipper Application

In this guide we are going to teach you how you can recover back your lost or stolen Instagram account using the new made application for this called “InstaRipper”

Before using this app, you should know that there is official [Instagram’s guide](#) to help users retrieve back lost accounts. We recommend trying their methods first. And if it doesn’t help, then you should go with the InstaRipper.

In short, try to recover access to your lost profile by following the “I forgot my password” protocol with sending verification link back to your email address you’ve used to sign up for your IG account.

You have option to do same with phone number as well, by receiving link via SMS message from Instagram.

There are also many people who lose these credentials too. In this case you should try to recover access to your e-mail address or re-gain same phone number again.

1. For email, if you lost password, try to contact your e-mail provider such as Gmail/Hotmail/Apple (iCloud) or some other from their contact page where you can find account recovery section. They may ask you to verify your identity by providing your ID card/ passport / driver’s license or similar. So be prepared to have it aside. You need to consider taking [every possible step](#) to try, before someone else registers same email name if it gets expires. So, act fast!
2. For phone number; If your old number is inside Instagram account and now you’re using a different one, it may be possible to regain the old one by visiting your phone network provider’s store and ask them to buy a new SIM card with a number you were using before.
You also make sure to bring your ID card with yourself to verify you were once owning a number you want to regain.

Well if none of these methods above helped, then you're ready for alternatives.

What is InstaRipper?

Developers of this application are remaining anonymous still as of today, even after the software has been already 2 years available for users.

They have many legal problems with Instagram since their software started to be used in wrong purposes then it's supposed to be – recovery solution.

Instead, many black-hat hackers used this tool to massively steal people's Instagram accounts and selling them on dark web marketplace.

After, InstaRipper authors were forced to shut down their app and website for some months in 2019. And back after they managed to retrieve everything back with their new *terms & conditions* policy which protects them from any illegal actions one can perform with this tool.

In short: InstaRipper is made to help users who lost their IG accounts because of hacking or forgetting a password – To regain it back.

Not to hack other people's accounts without their permission!

If you need InstaRipper to retrieve back your lost account and find login password, you can download the application from its official website.

Go to [InstaRipper's website](#) for download.

Do not use any other website to download the tool else you may get yourself a virus!

App Usage

InstaRipper application is available to operate properly on every modern device of nowadays; mobile phones and desktop PC's too.

There is the list of all operating systems which can run InstaRipper successfully:

- Microsoft Windows
- macOS
- Android (.Apk)
- iOS (iPhone & iPad)

Make sure to download it from the device you'd like to install it on, as its website will automatically redirect you to the OS version you're currently using.

Possible Troubleshoots

Users with older operating systems, such as Windows XP (SP2 and older) may be unable to start the software because of lacking the Microsoft's NET framework. (This version didn't have it back then, but it's possible to install it).

- You can easily fix this problem by installing [NET framework](#).

And for the end, good luck with recovering back your precious Instagram account!

All best,
SideDC
